Voyages and Ports CSV Documentation

Document Version: 1

Date: September 08, 2025

Introduction

This guide provides simple, step-by-step instructions for preparing your files to ensure that your data is clear, consistent, and ready to be used by the Manage your UK Emissions Trading Scheme (METS) reporting service.

Use the following information to complete the Excel template that can be downloaded on the relevant page of the service.

Understanding the structure of the voyages or ports data file

The templates for the voyages or ports data files are divided into three main sections. The data you enter must match the data in the ship details section exactly. It is important that you understand these sections to ensure that each entry is completed accurately and meets the required data submission criteria:

1. **Voyage/Port details**: This section captures the essential administrative and logistical information for each voyage port call. These fields are mandatory for every entry. (*Fields included: IMO Number, Country code of port, Port code, Date of arrival, Actual time of arrival (ATA), Date of departure, Actual time of departure (ATD))*

IMO Number	Country code of departure	Port code of departure	Date of departure	Actual time of departure (ATD)	Country code of arrival	Port code of arrival	Date of arrival	Actual time of arrival (ATA)
1234567	*GB*	*GBAOT*	*DD/MM/YYYY*	*HH:MM:SS*	*GB*	*GBABV*	*DD/MM/YYYY*	*HH:MM:SS*

2. **Fuel Consumption Data**: This section is for reporting consumption by detailing the types and amounts of fuel consumed. *(Fields included: Fuel origin, Fuel type, Other fuel, Unique emission source name, Methane slip, Amount, Measuring unit, Density)*.

Fuel origin	Fuel type	Other fuel (O)	Unique emission source name (O)	Methane slip (O)	Amount	Measuring unit	Density (O)
Fossil	*Other*	*Turbo Fuel*	*Turbo X source*	*0.5*	*7899878*	*TONNES*	

3. **Direct Emissions Data**: This section is for reporting emissions using Direct Measurement (Method D). *(Fields included: CO2 emissions (t), CH4 emissions (tCO2e), N2O emissions (tCO2e))*.

CO2 emissions	CH4 emissions (CO2e)	N2O emissions (CO2e)
3456.43212	*3456.43212*	*3456.43212*

You must provide data in at least one of the last two sections (*2. Fuel Consumption Data and 3. Direct Emissions Data*)

How to enter your data in the Excel template

When entering data into the template you must follow this guidance to avoid errors:

Headers (the top row of information)

- The titles in the header row of the sheet must match the titles in the template, for example Country code of departure, Fuel type, Unique emission source name
- The header titles must be plain text
- Don't use multiple lines within a single title cell
- Every title cell must have a name; don't leave any blank

Data starts right below titles

Your voyages or ports information must begin on the second row, directly under the header titles for each column. Don't leave any blank rows between the titles and your data.

No empty gaps in data

Don't leave whole rows or columns empty in the middle of your information. The service may not record any data after the empty cells.

Reporting emissions

Emissions for each voyage or port call must be reported using one of three accepted methods:

- **Reporting via fuel consumption data only**
  - Provide details about the fuel consumed (for example fuel type, emissions source, methane slip, amount, measuring unit, density)
- **Reporting direct measurement (Method D) only**
  - Provide the direct CO2, CH4, and N2O emission figures
- **Reporting both fuel consumption and direct measurement (Method D)**
  - Provide both detailed fuel consumption information and the direct CO2, CH4, and N2O emission figures. This may be used in situations where only some greenhouse gases are measured through direct measurement and the rest are calculated. Be aware of double accounting if using this approach

If a voyage or a port call entry does not provide data using at least one of these methods (neither fuel consumption nor direct measurement data is present), the entry will be rejected.

Handling multiple fuel types (voyages/port calls)

- If a voyage or port call needs to record more than one fuel type, use a new row for each additional fuel type. For these new rows, all the **voyage/port call details** must remain the same as the original row. Only the **fuel consumption data** should differ. This ensures all fuel types are correctly linked to the same voyage or port call, maintaining accurate overall voyage/port call and emissions data.

To update an existing fuel type entry, first delete the relevant voyages from METS, then reupload the updated CSV file

Formatting information

The data you enter into the template must be formatted in a specific way to avoid errors or incorrect calculations by the service. More information can be found in the Field rules section.

- **Text**: Enter text simply. Avoid extra spaces at the beginning or end of words.

- **Numbers**: Enter numbers as plain numbers. Don't include percentage signs (%) or symbols directly in the cells. Set these cells to "General" or "Number" format. If you have decimals, use a period (.) consistently (for example 25.50).
- **Dates**: Dates must be entered as DD/MM/YYYY (for example 06/11/2025).
- **Time**: Use a consistent format (for example HH:MM:SS for 24-hour time).
- **Yes/No fields**: If a field asks for a yes or no answer, use the full word instead of Y or N.
- **Use predefined lists**: For certain fields, you must choose from a predefined list of options. This helps us keep data consistent and accurate. Please ensure that the values you enter exactly match one of the options on the “Data lists” section.
- **No formulas, automated tools (macros), charts, or external links:** Your file must only contain the actual information (raw data). Remove any formulas, charts, embedded items, automated programs or links to other files. These can cause security issues, errors when reading the data, or simply won't be used by the service. If you use a formula, make sure you copy its result and paste it as a plain value before saving.
- **Keep formatting simple**: Avoid adding too much formatting like cell colours, bolding, italics, or special fonts, as this can sometimes interfere with how data is read by the service.

How your CSV file should look

The format and structure of your CSV file is very important for the METS service to read it correctly.

- **Best file type**: Always save your file as a **CSV UTF-8 (Comma delimited) (*.csv)**. This is the most common and compatible type.
- **One main sheet**: All important information should be on one tab (worksheet) within your file.
- **No merged cells**: Do not merge cells. When cells are merged, it can cause problems when the service tries to read your data.
- **Nothing hidden**: Make sure all the information you want us to use is visible. If there's information you don't want included, remove it instead of hiding any rows, columns, or sheets.
- **No grouped rows or columns**: If you have grouped rows or columns in Excel, ungroup them before saving and uploading the file.

How to prepare your file

When preparing your file:

- **Make sure all emissions are reported**: If a voyage or a port call entry does not provide data using at least one of the accepted emissions reporting methods (neither fuel consumption nor direct emissions data is present), the file will be rejected.
- **Enter all essential information:** Ensure you've filled in all the required information for every entry. If something is mandatory or conditionally mandatory, it can't be left blank.
- **Be aware of multiple errors in one field:** It is possible for a single field in your file to have more than one error if it doesn't follow several rules. For example, a fuel type field might not be included in the Data List and also cannot match the provided information in other dependent subtasks of your report.
- **Don’t enter numbers with letters:** Don't put letters or symbols (like "tCO2") in cells meant only for numbers. Just enter the number itself.
- **Use a consistent date format:** Make sure all dates are entered as DD/MM/YYYY (for example 06/11/2025). Don't mix different date styles.
- **Convert the results of formulas:** If a cell has a formula, make sure you convert the result of the formula into a plain value before saving the file. The system needs the final number, not the calculation.
- **Make sure headers match the template:** Double-check that your column titles (like "Unique emission source name") are spelled correctly.
- **Don’t include pictures or charts:** Don't put pictures, charts, or other graphics in the file. The service only processes raw data.

Field rules

Field	Required	Type	Rules	Example
IMO Number	Yes	Text	Must be 7 digits	1234567
Country code of departure	Yes	Text	2 letters ISO 3166-1 alpha-2 country code	GB
Port code of departure	Yes	Text	5 letters UN/LOCODE of the port of departure If the port is not included in the system, you may choose the option NA	GBAOT
Date of departure	Yes	Date	Date in DD/MM/YYYY format	15/08/2025
Actual time of departure (ATD)	Yes	Time	Time in HH:MM:SS format (GMT)	14:00:00
Country code of arrival	Yes	Text	2 letters ISO 3166-1 alpha-2 country code	GB
Port code of arrival	Yes	Text	5 letters UN/LOCODE of the port of arrival If the port is not included in the system, you may choose the option NA	GBABV
Date of arrival	Yes	Date	Date in DD/MM/YYYY format	15/08/2025
Actual time of arrival (ATA)	Yes	Time	Time in HH:MM:SS format (GMT)	16:00:00
Fuel origin	Yes	Text	Check “Data list” below	Fossil
Fuel type	Yes	Text	Check “Data list” below	HFO
Other fuel (O)	No	Text	Any text	Another Type

Unique emission source name	No	Text	A text from “List of Ships” subtask.	Boiler source
Methane slip	No	Numeric	Max 2 Decimals Range [0,00%... 100,00%]	0
Amount	Yes	Numeric	Max 5 Decimals Range [0...N)	1000
Measuring unit	Yes	Text	Check “Data list” below	M3
Density	No	Numeric	Max 3 Decimals Range (0...1]	0.8
CO2 emissions	Yes	Numeric	Max 7 Decimals Range [0...N)	4500500
CH4 emissions (tCO2e)	Yes	Numeric	Max 7 Decimals Range [0...N)	4500000
N2O emissions (tCO2e)	Yes	Numeric	Max 7 Decimals Range [0...N)	4500500
